GRAPE CRUSH REPORT OVERVIEW

Information contained in this Report was supplied by processors to fulfill the reporting requirements of Section 55601.5 of the Food and Agricultural Code.

The Preliminary Grape Crush Report includes all grape tonnage crushed during the 2004 season. It also includes purchased tonnage and pricing information for grapes with final prices prior to January 10, 2005. The March 10, 2005 Final Grape Crush Report will contain any late reports or corrections to the preliminary report. Please notify CASS of any corrections for the Final Grape Crush Report by February 18, 2005.

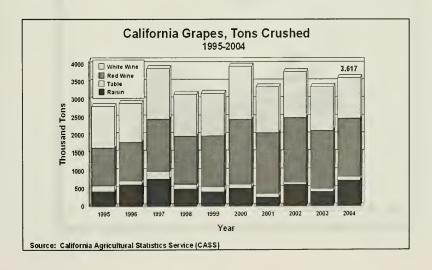

Details of the crushed tonnage, degrees Brix, and weighted average prices were reported by grape type and variety, as well as by grape pricing districts. The 17 districts refer to the area in which the grapes were grown as defined in the Administrative Code. A district map is located on the inside of the front cover.

SUMMARY OF GRAPE TONNAGES AND PRICES

The 2004 crush totaled 3,616,951 tons, up 7 percent from the 2003 crush of 3,370,121 tons. Red wine varieties accounted for the largest share of all grapes crushed, at 1,637,024 tons, virtually unchanged from 2003. The 2004 white wine variety crush totaled 1,139,588 tons, down 7 percent from 2003. Tons crushed of raisin type varieties totaled 726,946, up 72 percent from 2003, while tons crushed of table type varieties totaled 113,393, up 35 percent from 2003. (See chart below.)

Beginning with the 1999 season, the Grape Crush Report includes the total number of tons crushed for concentrate production. In determining grape tonnage crushed for concentrate production, each processor was required to report the estimated equivalent tons of grapes crushed for grape concentrate. For the 2004 season, this total was 658,048 tons, approximately 18 percent of the 2004 grape crush total. This report provides only the aggregate figure for grapes crushed for concentrate production and does not include information by district, type, or variety.

California grape growers received prices in 2004 for raisin, table, and white and red wine grapes that were, on average, above the 2003 prices. The 2004 average price of all varieties was \$481.91, up 2 percent from 2003. Average prices for the 2004 crop by type were as follows: red wine grapes, \$626.18, up 3 percent from 2003; white wine grapes, \$486.94, up 13 percent from 2003; raisin grapes, \$199.86, up 110 percent; and table grapes, \$198.52, up 117 percent. These price levels have not been adjusted for inflation.

LEADING GRAPE VARIETIES AND DISTRICTS

In 2004, Thompson Seedless accounted for the largest percentage of crush volume with 19 percent. Chardonnay accounted for the second leading percentage of crush with 15 percent of the total crush. The next eight highest percentages of grapes crushed were all wine varieties.

Grapes produced in District 4 (Napa County) received the highest average price of \$2,942.53 per ton, down 3 percent from 2003. District 3 (Sonoma and Marin counties) received the second highest return of \$1,868.33, down 4 percent from 2003. The 2004 Chardonnay price of \$693.49 was up 4 percent from 2003, while the Cabernet Sauvignon price of \$982.38 was down 3 percent from 2003. The 2004 average price for Merlot was \$795.58, virtually unchanged from 2003, while the Zinfandel average price of \$471.97 was up 10 percent from 2003.

EXPLANATION OF TABLES

TABLE 1 is a <u>summary of the 2004 crop State totals</u> by grape type and varieties that are shown in detail by grape pricing districts in Tables 2 through 6. State totals and averages for 2003 are shown for comparison.

TABLE 2 includes <u>over-the-scale fresh tonnage of all grapes crushed</u> by California processors from the 2004 crop. Over-the-scale fresh weight tonnage includes materials other than grapes (MOG) and defects. This table is broken down by the 17 grape pricing districts and by variety. State totals for 2003 are shown for comparison. Crushed tonnage includes <u>all grapes crushed</u> whether: grown and crushed by processors; purchased and crushed by processors; crushed by cooperatives, juice manufacturers, etc.; or crushed for others, including growers.

TABLE 3 shows the <u>weighted average degrees Brix for all grapes crushed</u> (TABLE 2) by California processors from the 2004 crop. The weighted average degrees Brix is reported by grape pricing districts and variety. State averages for 2003 are shown for comparison.

TABLE 4 includes net weight fresh tonnage of all grapes purchased for wine, concentrate, juice, vinegar, and beverage brandy by California processors from the 2004 crop. Net weight fresh tonnage does not include material other than grapes (MOG) and defects or other weight adjustments deducted from gross weight. The purchased tonnage is reported by variety and grape pricing districts. State totals for 2003 are shown for comparison. TABLE 4 does not include tonnage purchased as distilling material other than beverage brandy, this is shown in TABLE 7. Prices for all tonnage shown in this table are final and not subject to change. Grapes pooled by cooperatives, those grown by processors and used for their own production and grapes crushed to growers' accounts are not included.

TABLE 5 shows the <u>weighted average degrees Brix for all grapes purchased for wine, concentrate, juice, vinegar, and beverage brandy</u> (TABLE 4) by California processors from the 2004 crop. The weighted average degrees Brix is reported by grape pricing districts and variety. State averages for 2003 are shown for comparison. TABLE 5 does not include degrees Brix of tonnage purchased as distilling material other than beverage brandy, this is shown in TABLE 7. Grapes pooled by cooperatives, those grown by processors and used for their own production and grapes crushed to growers' accounts are not included.

TABLE 6 gives the <u>weighted average price per ton, delivered basis, of all tonnage purchased for wine, concentrate, juice, vinegar, and beverage brandy</u> (TABLE 4) by California processors from the 2004 crop. The weighted average prices are reported by variety, and grape pricing districts. State averages for 2003 are shown for comparison. TABLE 6 does not include prices of tonnage purchased as distilling material other than beverage brandy, this is shown in TABLE 7. Prices shown in this table are final and not subject to change. Grapes pooled by cooperatives, those grown by processors and used for their own production and grapes crushed to growers' accounts are not included.

Weighted average prices reflect final prices through January 10, 2005 and include any Brix adjustments, bonuses or allowances. Prices are equivalent to delivered basis in the area grown including normal within-area hauling allowances. Purchases made on a roadside basis include the usual hauling allowance for local delivery in the area grown. Out-of-area purchases made on a delivered basis do not include extra hauling allowances for delivery outside the area.

The following example indicates the method used for calculating weighted averages:

Co	mbined	. 1			186.6	20.6	3,841.9	131.1	131.1	20.2	2,648.6	450.0	19.0	25.0	+ or - 10%		22.0	20.0	24.0	385.31	50,514.75

Column 4 was obtained by dividing the total Over the Scale Tons (Column 3) into the Total Brix of these same tons (Column A):

3.841.9 = 20.6
186.6

Column 7 was obtained by dividing the Purchased Tons Only (Column 5) into the Total Brix of these same tons (Column B):

2,648.6 = 20.2

131.1

Column 16 was obtained by dividing the total Purchased Tons Only (Column 5) into the total dollars paid for these same tons (Column C): \$50,514.75 = \$385.31

TABLE 7 shows <u>all grape tonnage purchased as distilling material other than beverage brandy</u> by California processors from the 2004 crop. The tonnage, weighted average degrees Brix and price per ton are shown by grape type and variety. State totals and averages for 2003 are given for comparison.

TABLE 8 shows <u>base prices paid to growers</u> by Brix adjustment factors, purchased tonnage, type, variety and reporting district where grown. Weighted average base prices and total purchased tonnage are included.

The Brix adjustment factors determine adjustments to base prices to compensate for sugar variations. In this report, adjustments are expressed in dollars per ton, or percent of base price per degree variance from the established Brix base. Occasional lots are traded on price per degree Brix as delivered.

TABLE 9 includes tonnage of all grapes crushed to growers' accounts by California processors from the 2004 crop. Growers retained ownership of these grapes at the time of crushing. This tonnage is reported by grape pricing district and variety. Comparisons with 2003 are shown. (Table 9 only appears in the Final Grape Crush Report.)

TABLE 10 gives the <u>weighted average price per ton, delivered basis, of all tonnage purchased from non-related sources for wine, concentrate, juice, vinegar, and beverage brandy</u> (TABLE 4) by California processors from the 2004 crop. The weighted average prices are reported by variety, and grape pricing districts. State averages for 2003 are shown for comparison. TABLE 10 does not include prices of tonnage purchased as distilling material other than beverage brandy, this is shown in TABLE 7. Prices shown in this table are final and not subject to change. Grapes pooled by cooperatives, those grown by processors and used for their own production and grapes crushed to growers' accounts are not included.

Non-Related Purchased Tons: Excludes tonnage of grapes purchased from a grower if:

- (a) The grower or an affiliate of the grower, or both the grower and the affiliate of the grower, owned, directly or indirectly, at least 5 percent of the indicia of ownership or voting authority of the winery (processor);
- (b) The winery (processor) or an affiliate of the winery, or both the winery and the affiliate of the winery, owned, directly or indirectly, at least 5 percent of the indicia of ownership or voting authority of the grower;
- (c) The winery (processor) or an affiliate of the winery, or both the winery and the affiliate of the winery, provided long-term financing to the grower in exchange for rights or options to purchase a significant portion of the grower's harvest.

Synonyms for Grape Variety Names

(First synonym listed was used for this publication.)

Beauty Seedless * - Black Beauty
Black Prince * - Rose of Peru
Burger * - Monbadon
Chardonnay * - Pinot Chardonnay
Cinsaut * - Black Malvoisie, Black Malvasia
Emerald Seedless * - Black Seedless
Flame Seedless * - Red Flame
Gamay (Napa) * - Gamay, Valdiguie
Gray Riesling * - Trousseau Gris
Grenache * - Grenache Noir
Italia * - Muscat Italia
Malaga * - White Malaga

Malvasia Bianca * - Vennentino, Vermintino

Alicante Bouschet * - Alicante

Marechal Foch * - Foch
Mataro * - Mourvedre
Meunier * - Pinot Meunier
Moscato Gaillo * - Muscat Yellow
Muscat Blanc * - Muscat Canelli,
Muscat Blanc A Petits Grains
Muscat Hamburg * - Black Muscat
Negrette * - Pinot St. George
Nero D'Avola * - Calabrese
Palomino * - Golden Chasselas
Pinot Gris * - Pinot Grigio
Portugieser Blauer * - Blue Portugues
Princess * - Melissa
Red Crimson * - Crimson Seedless

Red Globe * – Rose Ito
Refosco * – Mondeuse
Rubired * – Tintoria
Ruby Seedless * – King Ruby
Sangiovese * – Sangioveto, Brunello
Sauvignon Vert * – Muscadelle
St. Emilion * – Ugni Blanc, Trebbiano
Syrah * – French Syrah, Shiraz, Syrah Noir
Tempranillo * – Tinta Ronz, Valdepenas
Touriga Nacional * – Touriga
Trousseau * – Bastardo
White Riesling * – Johannisberg Riesling,
Riesling

TABLE 8 - SUPPLEMENT: 2004 BRIX ADJUSTMENT FACTORS

The following Brix adjustment factors are on a per degree Brix basis and are normally calculated to a tenth of a degree, and are cumulative unless otherwise indicated. Most processors, however, indicate maximum and/or minimum Brix acceptance limits. Grapes testing above or below these limits may be subject to price renegotiation, acceptance for use other than for table wine, or rejection by the processors. Discounts for high sugar apply to both base price and bonus unless otherwise stated. There are factors other than Brix, such as material other than grapes (MOG), defects, weight loss in late harvest grapes, and sugar/acid ratios that affect grape prices. These were not considered in this presentation, unless otherwise stated, but were considered in arriving at weighted average prices.

Most processors, however, indicate maximum and/or minimum Brix acceptance limits. Grapes testing above or below these limits may be subject to price renegotiation, acceptance for use other than for table wine, or rejection by the processors. Discounts for high sugar apply to both base price and bonus unless otherwise stated. There are factors other than Brix, such as material other than grapes (MOG), defects, weight loss in late harvest grapes, and sugar/acid ratios that affect grape prices. These were not considered in this presentation, unless otherwise stated, but were considered in arriving at weighted average prices.

The following Brix adjustment factors are on a per degree Brix basis and are normally calculated to a tenth of a degree, and are cumulative unless otherwise indicated. Most processors, however, indicate maximum and/or minimum Brix acceptance limits. Grapes testing above or below these limits may be subject to price renegotation, acceptance for use other than for table wine, or rejection by the processors. Discounts for high sugar apply to both base price and bonus unless otherwise stated. There are factors other than Brix, such as material other than grapes (MOG), defects, weight loss in late harvest grapes, and sugar/acid ratios that affect grape prices. These were not considered in this presentation, unless otherwise stated, but were considered in arriving at the weighted average prices.

FEBRUARY 10, 2006

<u>GROWERS</u> AND VINTNERS

Please notify USDA, NASS, California Field Office of any corrections by February 17, 2006.

GRAPE CRUSH REPORT OVERVIEW

Information contained in this Report was supplied by processors to fulfill the reporting requirements of Section 55601.5 of the Food and Agricultural Code.

The Preliminary Grape Crush Report includes all grape tonnage crushed during the 2005 season. It also includes purchased tonnage and pricing information for grapes with final prices prior to January 10, 2006. The March 10, 2006 Final Grape Crush Report will contain any late reports or corrections to the preliminary report. Please notify us of any corrections for the Final Grape Crush Report by February 17, 2006.

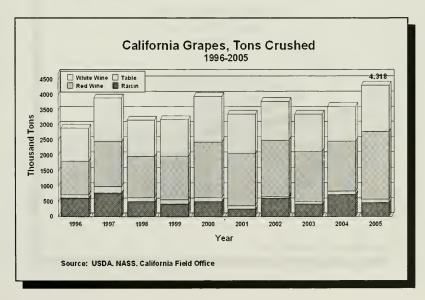

Details of the crushed tonnage, degrees Brix, and weighted average prices were reported by grape type and variety, as well as by grape pricing districts. The 17 districts refer to the area in which the grapes were grown as defined in the Administrative Code. A district map is located on the inside of the front cover.

SUMMARY OF GRAPE TONNAGES AND PRICES

The 2005 crush totaled a record 4,318,083 tons, up 19 percent from the 2004 crush of 3,615,278 tons. Red wine varieties accounted for the largest share of all grapes crushed, at 2,220,096 tons, up 35 percent from 2004. The 2005 white wine variety crush totaled 1,524,404 tons, up 34 percent from 2004. Tons crushed of raisin type varieties totaled 467,477, down 36 percent from 2004, while tons crushed of table type varieties totaled 106,106, down 6 percent from 2004. (See chart below.)

Beginning with the 1999 season, the Grape Crush Report includes the total number of tons crushed for concentrate production. In determining grape tonnage crushed for concentrate production, each processor was required to report the estimated equivalent tons of grapes crushed for grape concentrate. For the 2005 season, this total was 544,263 tons, approximately 13 percent of the 2005 grape crush total. This report provides only the aggregate figure for grapes crushed for concentrate production and does not include information by district, type, or variety.

California grape growers received prices in 2005 for raisin and table grapes that were, on average, below the 2004 prices, while the prices received for red and white were, on average, above the 2004 prices. The 2005 average price of all varieties was \$531.65, up 10 percent from 2004. Average prices for the 2005 crop by type were as sollows: red wine grapes, \$634.40, up 1 percent from 2004; white wine grapes, \$503.15, up 3 percent from 2004; raisin grapes, \$164.24, down 18 percent; and table grapes, \$121.21, down 39 percent. These price levels have not been adjusted for inflation.

Source: USDA, NASS, California Field Office

LEADING GRAPE VARIETIES AND DISTRICTS

In 2005, Chardonnay accounted for the largest percentage of crush volume with 17.1 percent. Cabernet Sauvignon accounted for the second leading percentage of crush with 12.5 percent of the total crush. The next eight highest percentages of grapes crushed were all wine varieties, with the exception of Thompson Seedless.

Grapes produced in District 4 (Napa County) received the highest average price of \$2,989.36 per ton, up 2 percent from 2004. District 3 (Sonoma and Marin counties) received the second highest return of \$1,868.17, virtually unchanged from 2004. The 2005 Chardonnay price of \$712.12 was up 3 percent from 2004, while the Cabernet Sauvignon price of \$939.23 was down 4 percent from 2004. The 2005 average price for Merlot was \$728.99, down 9 percent from 2004, while the Zinfandel average price of \$471.20 was down less than 1 percent from 2004.

EXPLANATION OF TABLES

TABLE 1 is a <u>summary of the 2005 crop State totals</u> by grape type and varieties that are shown in detail by grape pricing districts in Tables 2 through 6. State totals and averages for 2004 are shown for comparison.

TABLE 2 includes <u>over-the-scale fresh tonnage of all grapes crushed</u> by California processors from the 2005 crop. Over-the-scale fresh weight tonnage includes materials other than grapes (MOG) and defects. This table is broken down by the 17 grape pricing districts and by variety. State totals for 2004 are shown for comparison. Crushed tonnage includes <u>all grapes crushed</u> whether: grown and crushed by processors; purchased and crushed by processors; crushed by cooperatives, juice manufacturers, etc.; or crushed for others, including growers.

TABLE 3 shows the <u>weighted average degrees Brix for all grapes crushed</u> (TABLE 2) by California processors from the 2005 crop. The weighted average degrees Brix is reported by grape pricing districts and variety. State averages for 2004 are shown for comparison.

TABLE 4 includes net weight fresh tonnage of all grapes purchased for wine, concentrate, juice, vinegar, and beverage brandy by California processors from the 2005 crop. Net weight fresh tonnage does not include material other than grapes (MOG) and defects or other weight adjustments deducted from gross weight. The purchased tonnage is reported by variety and grape pricing districts. State totals for 2004 are shown for comparison. TABLE 4 does not include tonnage purchased as distilling material other than beverage brandy, this is shown in TABLE 7. Prices for all tonnage shown in this table are final and not subject to change. Grapes pooled by cooperatives, those grown by processors and used for their own production and grapes crushed to growers' accounts are not included.

TABLE 5 shows the <u>weighted average degrees Brix for all grapes purchased for wine, concentrate, juice, vinegar, and beverage brandy</u> (TABLE 4) by California processors from the 2005 crop. The weighted average degrees Brix is reported by grape pricing districts and variety. State averages for 2004 are shown for comparison. TABLE 5 does not include degrees Brix of tonnage purchased as distilling material other than beverage brandy, this is shown in TABLE 7. Grapes pooled by cooperatives, those grown by processors and used for their own production and grapes crushed to growers' accounts are not included.

TABLE 6 gives the weighted average price per ton, delivered basis, of all tonnage purchased for wine, concentrate, juice, vinegar, and beverage brandy (TABLE 4) by California processors from the 2005 crop. The weighted average prices are reported by variety, and grape pricing districts. State averages for 2004 are shown for comparison. TABLE 6 does not include prices of tonnage purchased as distilling material other than beverage brandy, this is shown in TABLE 7. Prices shown in this table are final and not subject to change. Grapes pooled by cooperatives, those grown by processors and used for their own production and grapes crushed to growers' accounts are not included.

Weighted average prices reflect final prices through January 10, 2006 and include any Brix adjustments, bonuses or allowances. Prices are equivalent to delivered basis in the area grown including normal within-area hauling allowances. Purchases made on a roadside basis include the usual hauling allowance for local delivery in the area grown. Out-of-area purchases made on a delivered basis do not include extra hauling allowances for delivery outside the area.

The following example indicates the method used for calculating weighted averages:

									DA*	TA PAGE										
			-		SECTION	l.	SECTION II.													
IDE	NTIFICA	TION			Grapes Cru Your Facil															
VARIETY				Over	Wtd.		Purchased	Tons Only	Wtd.	Acceptable Brix Limits		Brix Adjustment		Adjust		.imits	Wtd.	Total Dal

Petite Sirah	1			10.6	23.5	249.1	10.6	10.6	23 5	249.1	450.0	19.0	25.0	+ or - 10%		22.0	20.0	24.0	517.50	5,485.
Combined	1			186.6	20.6	3,841.9	131.1	131,1	20.2	2,648.6	450.0	19.0	25.0	+ or - 10%		22.0	20.0	24.0	385.31	50,514.

Column 4 was obtained by dividing the total Over the Scale Tons (Column 3) into the Total Brix of these same tons (Column A):

3.841.9 = 20.6

186.6

Column 7 was obtained by dividing the Purchased Tons Only (Column 5) into the Total Brix of these same tons (Column B):

2,648.6 = 20.2

131.1

Column 16 was obtained by dividing the total Purchased Tons Only (Column 5) into the total dollars paid for these same tons (Column C):

\$\frac{\$50,514.75}{131.1} = \$385.31\$

TABLE 7 shows <u>all grape tonnage purchased as distilling material other than beverage brandy</u> by California processors from the 2005 crop. The tonnage, weighted average degrees Brix and price per ton are shown by grape type and variety. State totals and averages for 2004 are given for comparison.

TABLE 8 shows <u>base prices paid to growers</u> by Brix adjustment factors, purchased tonnage, type, variety and reporting district where grown. Weighted average base prices and total purchased tonnage are included.

The Brix adjustment factors determine adjustments to base prices to compensate for sugar variations. In this report, adjustments are expressed in dollars per ton, or percent of base price per degree variance from the established Brix base. Occasional lots are traded on price per degree Brix as delivered.

TABLE 9 includes tonnage of all grapes crushed to growers' accounts by California processors from the 2005 crop. Growers retained ownership of these grapes at the time of crushing. This tonnage is reported by grape pricing district and variety. Comparisons with 2004 are shown. (Table 9 only appears in the Final Grape Crush Report.)

TABLE 10 gives the <u>weighted average price per ton, delivered basis, of all tonnage purchased from non-related sources for wine, concentrate, juice, vinegar, and beverage brandy</u> (TABLE 4) by California processors from the 2005 crop. The weighted average prices are reported by variety, and grape pricing districts. State averages for 2004 are shown for comparison. TABLE 10 does not include prices of tonnage purchased as distilling material other than beverage brandy, this is shown in TABLE 7. Prices shown in this table are final and not subject to change. Grapes pooled by cooperatives, those grown by processors and used for their own production and grapes crushed to growers' accounts are not included.

Non-Related Purchased Tons: Excludes tonnage of grapes purchased from a grower if:

- (a) The grower or an affiliate of the grower, or both the grower and the affiliate of the grower, owned, directly or indirectly, at least 5 percent of the indicia of ownership or voting authority of the winery (processor);
- (b) The winery (processor) or an affiliate of the winery, or both the winery and the affiliate of the winery, owned, directly or indirectly, at least 5 percent of the indicia of ownership or voting authority of the grower;
- (c) The winery (processor) or an affiliate of the winery, or both the winery and the affiliate of the winery, provided long-term financing to the grower in exchange for rights or options to purchase a significant portion of the grower's harvest.

^{*} Synonyms for variety names are shown on Page 5.

See code descriptions in Table 8 - Supplement . 2005 Brix Adjustment Factors.
 Other categories include minor and mixed varieties.
 Price basis per Degree Brix.
 Price per Degree Brix not included in weighted average base price.

The following Brix adjustment factors are on a per degree Brix basis and are normally calculated to a tenth of a degree, and are cumulative unless otherwise indicated. Most processors, however, indicate maximum and/or minimum Brix acceptance limits. Grapes testing above or below these limits may be subject to price renegodiation, acceptance for use other than for table wine, or rejection by the processors. Discounts for high sugar apply to both base price and bonus unless otherwise stated. There are factors other than Brix, such as material other than grapes (MOG), defects, weight loss in late harvest grapes, and sugar/acid ratios that affect grape prices. These were not considered in this presentation, unless otherwise stated, but were considered in arriving at weighted average prices.

considered in th	is present	ation, unless otherwise stated, but were considered in	arriving at weighted av	erage price	es.

The following Brix adjustment factors are on a per degree Brix basis and are normally calculated to a tenth of a degree, and are cumulative unless otherwise indicated. Most processors, however, indicate maximum and/or minimum Brix acceptance limits. Crapes testing above or below these limits may be subject to price renegotiation, acceptance for use other than for table wine, or rejection by the processors. Discounts for high sugar apply to both base price and bonus unless otherwise stated. There are factors other than Brix, such as material other than grapes (MOG), defects, weight loss in late harvest grapes, and sugar/acid ratios that affect grape prices. These were not considered in this presentation, unless otherwise stated, but were considered in arriving at well-fled average prices.

FEBRUARY 9, 2007

GROWERS AND VINTNERS

Please notify USDA, NASS, California Field Office of any corrections by February 16, 2007.

GRAPE CRUSH REPORT OVERVIEW

Information contained in this Report was supplied by processors to fulfill the reporting requirements of Section 55601.5 of the Food and Agricultural Code.

The Preliminary Grape Crush Report includes all grape tonnage crushed during the 2006 season. It also includes purchased tonnage and pricing information for grapes with final prices prior to January 10, 2007. The March 9, 2007 Final Grape Crush Report will contain any late reports or corrections to the preliminary report. Please notify us of any corrections for the Final Grape Crush Report by February 16, 2007.

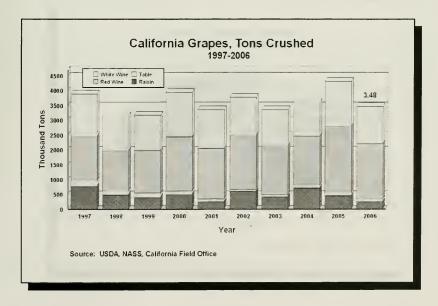

Details of the crushed tonnage, degrees Brix, and weighted average prices were reported by grape type and variety, as well as by grape pricing districts. The 17 districts refer to the area in which the grapes were grown as defined in the Administrative Code. A district map is located on the inside front cover.

SUMMARY OF GRAPE TONNAGES AND PRICES

The 2006 crush totaled 3,479,933 tons, down 20 percent from the record 2005 crush of 4,330,064 tons. Red wine varieties accounted for the largest share of all grapes crushed, at 1,867,247 tons, down 16 percent from 2005. The 2006 white wine variety crush totaled 1,260,132 tons, down 17 percent from 2005. Tons crushed of raisin type varieties totaled 267,021, down 43 percent from 2005, and tons crushed of table type varieties totaled 85,533, down 19 percent from 2005. (See chart below.)

Beginning with the 1999 season, the Grape Crush Report includes the total number of tons crushed for concentrate production. In determining grape tonnage crushed for concentrate production, each processor was required to report the estimated equivalent tons of grapes crushed for grape concentrate. For the 2006 season, this total was 462,564 tons, approximately 13 percent of the 2006 grape crush total. This report provides only the aggregate figure for grapes crushed for concentrate production and does not include information by district, type, or variety.

California grape growers received prices in 2006 for raisin grapes and white wine grapes that were, on average, below the 2005 prices, while the prices received for table grapes and red wine grapes were, on average, above the 2005 prices. The 2006 average price of all varieties was \$546.80, up 3 percent from 2005. Average prices for the 2006 crop by type were as follows: red wine grapes, \$634.31, up only slightly from 2005; white wine grapes, \$502.83, down 1 percent from 2005; raisin grapes, \$153.79, down 6 percent; and table grapes, \$137.17, up 13 percent. These price levels have not been adjusted for inflation.

LEADING GRAPE VARIETIES AND DISTRICTS

In 2006, Chardonnay accounted for the largest percentage of the total crush volume with 15.8 percent. Cabernet Sauvignon accounted for the second leading percentage of crush with 12.1 percent of the total crush. The next eight highest percentages of grapes crushed were all wine varieties, with the exception of Thompson Seedless.

Grapes produced in District 4 (Napa County) received the highest average price of \$3,050.73 per ton, up 2 percent from 2005. District 3 (Sonoma and Marin counties) received the second highest return of \$1,987.29, up 6 percent from 2005. The 2006 Chardonnay price of \$751.80 was up 5 percent from 2005, and the Cabernet Sauvignon price of \$953.44 was up 2 percent from 2005. The 2006 average price for Zinfandel was \$508.13, up 8 percent from 2005, while the Merlot average price was down 9 percent from 2005 at \$663.28 per ton.

EXPLANATION OF TABLES

TABLE 1 is a <u>summary of the 2006 crop State totals</u> by grape type and varieties that are shown in detail by grape pricing districts in Tables 2 through 6. State totals and averages for 2005 are shown for comparison.

TABLE 2 includes <u>over-the-scale fresh tonnage of all grapes crushed</u> by California processors from the 2006 crop. Over-the-scale fresh weight tonnage includes materials other than grapes (MOG) and defects. This table is broken down by the 17 grape pricing districts and by variety. State totals for 2005 are shown for comparison. Crushed tonnage includes <u>all grapes crushed</u> whether: grown and crushed by processors; purchased and crushed by processors; crushed by cooperatives, juice manufacturers, etc.; or crushed for others, including growers.

TABLE 3 shows the <u>weighted average degrees Brix for all grapes crushed</u> (TABLE 2) by California processors from the 2006 crop. The weighted average degrees Brix is reported by grape pricing districts and variety. State averages for 2005 are shown for comparison.

TABLE 4 includes net weight fresh tonnage of all grapes purchased for wine, concentrate, juice, vinegar, and beverage brandy by California processors from the 2006 crop. Net weight fresh tonnage does not include material other than grapes (MOG) and defects or other weight adjustments deducted from gross weight. The purchased tonnage is reported by variety and grape pricing districts. State totals for 2005 are shown for comparison. TABLE 4 does not include tonnage purchased as distilling material other than beverage brandy, this is shown in TABLE 7. Prices for all tonnage shown in this table are final and not subject to change. Grapes pooled by cooperatives, those grown by processors and used for their own production and grapes crushed to growers' accounts are not included.

TABLE 5 shows the <u>weighted average degrees Brix for all grapes purchased for wine, concentrate, juice, vinegar, and beverage brandy</u> (TABLE 4) by California processors from the 2006 crop. The weighted average degrees Brix is reported by grape pricing districts and variety. State averages for 2005 are shown for comparison. TABLE 5 does not include degrees Brix of tonnage purchased as distilling material other than beverage brandy, this is shown in TABLE 7. Grapes pooled by cooperatives, those grown by processors and used for their own production and grapes crushed to growers' accounts are not included.

TABLE 6 gives the <u>weighted average price per ton</u>, <u>delivered basis</u>, <u>of all tonnage purchased for wine</u>, <u>concentrate</u>, <u>juice</u>, <u>vinegar</u>, <u>and beverage brandy</u> (TABLE 4) by California processors from the 2006 crop. The weighted average prices are reported by variety, and grape pricing districts. State averages for 2005 are shown for comparison. TABLE 6 does not include prices of tonnage purchased as distilling material other than beverage brandy, this is shown in TABLE 7. Prices shown in this table are final and not subject to change. Grapes pooled by cooperatives, those grown by processors and used for their own production and grapes crushed to growers' accounts are not included.

Weighted average prices reflect final prices through January 10, 2007 and include any Brix adjustments, bonuses or allowances. Prices are equivalent to delivered basis in the area grown including normal within-area hauling allowances. Purchases made on a roadside basis include the usual hauling allowance for local delivery in the area grown. Out-of-area purchases made on a delivered basis do not include extra hauling allowances for delivery outside the area.

The next example indicates the method used for calculating weighted averages. The following two purchases were made.

Variety	District	Tons	Degrees Brix	Base Price	Price Paid Per Ton	Acceptable Brix Limits	Brix Adjustment Factors	Brix Adjustment Limits
Petite Sirah	1	155.5	20.6	\$450.00	\$364.50	19 - 25	+ or - 10%	Base 22, Min 20, Max 24
Petite Sirah	1	20.5	19.0	\$450.00	\$418.50	19 - 25	+ or - 10%	Base 22, Min 20, Max 24

Note: The variety, district, base price, and Brix Adjustment Factors (including Brix limits) are the same. The tons purchased, degrees Brix, and price paid per ton are the only differences in this example.

Step 1: Multiply the tons by the Brix for each lot purchased and then add the products to get the total. Also, add the tons purchased.

Variety	District	Tons	Degrees Brix	Total (Tons X Brix)
Petite Sirah	1	155.5	20.6	155.5 X 20.6 = 3,203.3
Petite Sirah	1	20.5	19.0	20.5 X 19.0 = 389.5
TOTALS		176.0		3.592.8

Step 2: Divide the total (3,592.8) by the total tons purchased (176.0) to get the Weighted Average Degrees Brix. 3,592.8

= 20.4 176.0

Step 3: Multiply the purchased tons by the Price Paid Per Ton for each lot purchased and then add the products to get the

total.

Variety	District	Tons	Price Paid Per Ton	Total (Tons X Brix)
Petite Sirah	1	155.5	\$364.50	155.5 X 364.50 = 56,679.8
Petite Sirah	1	20.5	\$418.50	20.5 X 418.50 = 8,579.3
TOTALS		176.0		65,259.1

Step 4: Divide the total (65,259.1) by the total tons purchased (176.0) to get the Weighted Average Price Per Ton:

65,259.1 = \$370.79

176.0

TABLE 7 shows <u>all grape tonnage purchased as distilling material other than beverage brandy</u> by California processors from the 2006 crop. The tonnage, weighted average degrees Brix and price per ton are shown by grape type and variety. State totals and averages for 2005 are given for comparison.

TABLE 8 shows <u>base prices paid to growers</u> by Brix adjustment factors, purchased tonnage, type, variety and reporting district where grown. Weighted average base prices and total purchased tonnage are included.

The Brix adjustment factors determine adjustments to base prices to compensate for sugar variations. In this report, adjustments are expressed in dollars per ton, or percent of base price per degree variance from the established Brix base. Occasional lots are traded on price per degree Brix as delivered.

TABLE 9 includes tonnage of all grapes crushed to growers' accounts by California processors from the 2006 crop. Growers retained ownership of these grapes at the time of crushing. This tonnage is reported by grape pricing district and variety. Comparisons with 2005 are shown. (Table 9 only appears in the Final Grape Crush Report.)

TABLE 10 gives the <u>weighted average price per ton, delivered basis, of all tonnage purchased from non-related sources for wine, concentrate, juice, vinegar, and beverage brandy (TABLE 4) by California processors from the 2006 crop. The weighted average prices are reported by variety, and grape pricing districts. State averages for 2005 are shown for comparison. TABLE 10 does not include prices of tonnage purchased as distilling material other than beverage brandy, this is shown in TABLE 7. Prices shown in this table are final and not subject to change. Grapes pooled by cooperatives, those grown by processors and used for their own production and grapes crushed to growers' accounts are not included.</u>

Non-Related Purchased Tons: Excludes tonnage of grapes purchased from a grower if:

- (a) The grower or an affiliate of the grower, or both the grower and the affiliate of the grower, owned, directly or indirectly, at least 5 percent of the indicia of ownership or voting authority of the winery (processor);
- (b) The winery (processor) or an affiliate of the winery, or both the winery and the affiliate of the winery, owned, directly or indirectly, at least 5 percent of the indicia of ownership or voting authority of the grower;
- (c) The winery (processor) or an affiliate of the winery, or both the winery and the affiliate of the winery, provided long-term financing to the grower in exchange for rights or options to purchase a significant portion of the grower's harvest.

Grape Variety Synonyms

Alicante Bouschet — Alicante
Black Prince — Rose of Peru
Blaufraenkisch — Lemberger
Burger — Monbadon
Chardonnay — Pinot Chardonnay,
Chardonnay Musque
Cinsaut — Black Malvoisie, Black Malvasia
Crimson Seedless — Red Crimson
Emerald Seedless — Black Seedless
Flame Seedless — Black Seedless
Flame Gamay (Napa) — Gamay, Valdiguie
Gray Riesling — Trousseau Gris
Grenache — Grenache Noir
Italia — Muscat Italia

Malaga - White Malaga

Malvasia Bianca — Vennentino, Vermintino
Marechal Foch — Foch
Mataro — Mourvedre
Meunier — Pinot Meunier
Moscato Gaillo — Muscat Yellow
Muscat Blanc — Muscat Canelli,
Muscat Blanc A Petits Grains
Muscat Hamburg — Black Muscat
Negrette — Pinot St. George
Nero D'Avola — Calabrese
Palomino — Golden Chasselas
Pinot Gris — Pinot Grigio
Princess — Melissa
Red Globe — Rose Ito
Refosco — Mondeuse

Ribolla Gialla — Rebolla
Rubired — Tintona
Ruby Seedless — King Ruby
Sangiovese — Sangioveto, Brunello
Sauvignon Vert — Muscadelle
St. Emilion — Ugni Blanc, Trebbiano
Syrah — French Syrah, Shiraz, Syrah Noir
Tempranillo — Tinta Roriz, Valdepenas
Touriga Nacional — Touriga
Trousseau — Bastardo
White Riesling — Johannisberg Riesling,
Riesling
Zinfandel — Primitivo

^{*} Synonyms for variety names are shown on Page 5.

a/ See code descriptions in Table 8 - Supplement: 2006 Brix Adjustment Factors.

b/ Other categories include minor and mixed varieties.

<sup>d/ Price per Degree Brix.

d/ Price per Degree Brix not included in weighted average base price.

e/ All prices based on per Degree Brix.</sup>

TABLE 8 - SUPPLEMENT: 2006 BRIX ADJUSTMENT FACTORS

The following Brix adjustment factors are on a per degree Brix basis and are normally calculated to a tenth of a degree, and are cumulative unless otherwise indicated. Most processors, however, indicate maximum and/or minimum Brix acceptance limits. Grapes testing above or below these limits may be subject to price renegotiation, acceptance for use other than for table wine, or rejection by the processors. Discounts for high sugar apply to both base pine and bonus unless otherwise stated. There are factors other than Brix, such as material other than grapes (MOG), defects, weight loss in late harvest gazar/acid ratios that affect grape prices. These were not considered in this presentation, unless otherwise stated, but were considered in arriving at weighted average prices.

TABLE 8 - SUPPLEMENT: 2006 BRIX ADJUSTMENT FACTORS

The following Brix adjustment factors are on a per degree Brix basis and are normally calculated to a tenth of a degree, and are cumulative unless otherwise indicated. Most processors, however, indicate maximum and/or minimum Brix acceptance limits. Grapes testing above below these limits may be subject to price renegotiation, acceptance for use other than for table wine, or rejection by the processors. Discounts for high sugar apply to both base price and bonus unless otherwise stated. There are factors other than Brix, such as material other than grapes (MOG), defects, weight loss in late harvest grapes, and sugar/acid ratios that affect grape prices. These were not considered in this presentation, unless otherwise stated. In the processor of the processor of

TABLE 8 - SUPPLEMENT: 2006 BRIX ADJUSTMENT FACTORS

The following Brix adjustment factors are on a per degree Brix basis and are normally calculated to a tenth of a degree, and are cumulative unless otherwise indicated. Most processors, however, indicate maximum and/or minimum Brix acceptance limits. Grapes testing above or below these limits may be subject to price renegotiation, acceptance for use other than for table wine, or rejection by the processors. Discounts for high sugar apply to both base price and bonus unless otherwise stated. There are factors other than Brix, such as material other than grapes (MOG), defects, weight loss in late harvest grapes, and sugar/acid ratios that affect grape prices. These were not considered in this presentation, unless otherwise stated, but were considered in arriving at weighted average prices.

FEBRUARY 8, 2008

<u>GROWERS</u> AND VINTNERS

Please notify USDA, NASS, California Field Office of any corrections by February 15, 2008.

GRAPE CRUSH REPORT OVERVIEW

Information contained in this Report was supplied by processors to fulfill the reporting requirements of Section 55601.5 of the Food and Agricultural Code.

The Preliminary Grape Crush Report includes all grape tonnage crushed during the 2007 season. It also includes purchased tonnage and pricing information for grapes with final prices prior to January 10, 2008. The March 10, 2008 Final Grape Crush Report will contain any late reports or corrections to the preliminary report. Please notify us of any corrections for the Final Grape Crush Report by February 15, 2008.

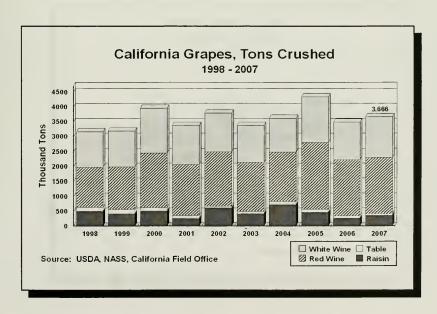

Details of the crushed tonnage, degrees Brix, and weighted average prices were reported by grape type and variety, as well as by grape pricing districts. The 17 districts refer to the area in which the grapes were grown as defined in the Administrative Code. A district map is located on the inside front cover.

SUMMARY OF GRAPE TONNAGES AND PRICES

The 2007 crush totaled 3,665,929 tons, up 5 percent from the 2006 crush of 3,488,871 tons. Red wine varieties accounted for the largest share of all grapes crushed, at 1,868,187 tons, down slightly from 2006. The 2007 white wine variety crush totaled 1,370,754 tons, up 9 percent from 2006. Tons crushed of raisin type varieties totaled 363,519, up 36 percent from 2006, and tons crushed of table type varieties totaled 63,469, down 26 percent from 2006. (See chart below.)

Beginning with the 1999 season, the Grape Crush Report includes the total number of tons crushed for concentrate production. In determining grape tonnage crushed for concentrate production, each processor was required to report the estimated equivalent tons of grapes crushed for grape concentrate. For the 2007 season, this total was 465,368 tons, approximately 13 percent of the 2007 grape crush total. This report provides only the aggregate figure for grapes crushed for concentrate production and does not include information by district, type, or variety.

California grape growers received prices in 2007 for red grapes and white wine grapes that were, on average, below the 2006 prices, while the prices received for table grapes and raisin grapes were, on average, above the 2006 prices. The 2007 average price of all varieties was \$519.93, down 5 percent from 2006. Average prices for the 2007 crop by type were as follows: red wine grapes, \$622.63, down 2 percent from 2006; white wine grapes, \$482.10, down 4 percent from 2006; raisin grapes, \$155.07, up slightly; and table grapes, \$141.43, up 3 percent. These price levels have not been adjusted for inflation.

LEADING GRAPE VARIETIES AND DISTRICTS

In 2007, Chardonnay accounted for the largest percentage of the total crush volume with 16.1 percent. Cabernet Sauvignon accounted for the second leading percentage of crush with 11.5 percent of the total crush. The next eight highest percentages of grapes crushed were all wine varieties, with the exception of Thompson Seedless.

Grapes produced in District 4 (Napa County) received the highest average price of \$3,253.80 per ton, up 7 percent from 2006. District 3 (Sonoma and Marin counties) received the second highest return of \$2,081.20, up 5 percent from 2006. The 2007 Chardonnay price of \$721.21 was down 4 percent from 2006, and the Cabernet Sauvignon price of \$981.49 was up 3 percent from 2006. The 2007 average price for Zinfandel was \$464.76, down 9 percent from 2006, while the Merlot average price was down 11 percent from 2006 at \$590.19 per ton.

EXPLANATION OF TABLES

TABLE 1 is a <u>summary of the 2007 crop State totals</u> by grape type and varieties that are shown in detail by grape pricing districts in Tables 2 through 6. State totals and averages for 2006 are shown for comparison.

TABLE 2 includes <u>over-the-scale fresh tonnage of all grapes crushed</u> by California processors from the 2007 crop. Over-the-scale fresh weight tonnage includes materials other than grapes (MOG) and defects. This table is broken down by the 17 grape pricing districts and by variety. State totals for 2006 are shown for comparison. Crushed tonnage includes <u>all grapes crushed</u> whether: grown and crushed by processors; purchased and crushed by processors; crushed by cooperatives, juice manufacturers, etc.; or crushed for others, including growers.

TABLE 3 shows the <u>weighted average degrees Brix for all grapes crushed</u> (TABLE 2) by California processors from the 2007 crop. The weighted average degrees Brix is reported by grape pricing districts and variety. State averages for 2006 are shown for comparison.

TABLE 4 includes <u>net weight fresh tonnage of all grapes purchased for wine, concentrate, juice, vinegar, and beverage brandy</u> by California processors from the 2007 crop. Net weight fresh tonnage does not include material other than grapes (MOG) and defects or other weight adjustments deducted from gross weight. The purchased tonnage is reported by variety and grape pricing districts. State totals for 2006 are shown for comparison. TABLE 4 does not include tonnage purchased as distilling material other than beverage brandy, this is shown in TABLE 7. Prices for all tonnage shown in this table are final and not subject to change. Grapes pooled by cooperatives, those grown by processors and used for their own production and grapes crushed to growers' accounts are not included.

TABLE 5 shows the <u>weighted average degrees Brix for all grapes purchased for wine, concentrate, juice, vinegar, and beverage brandy</u> (TABLE 4) by California processors from the 2007 crop. The weighted average degrees Brix is reported by grape pricing districts and variety. State averages for 2006 are shown for comparison. TABLE 5 does not include degrees Brix of tonnage purchased as distilling material other than beverage brandy, this is shown in TABLE 7. Grapes pooled by cooperatives, those grown by processors and used for their own production and grapes crushed to growers' accounts are not included.

TABLE 6 gives the <u>weighted average price per ton, delivered basis, of all tonnage purchased for wine, concentrate, juice, vinegar, and beverage brandy</u> (TABLE 4) by California processors from the 2007 crop. The weighted average prices are reported by variety, and grape pricing districts. State averages for 2006 are shown for comparison. TABLE 6 does not include prices of tonnage purchased as distilling material other than beverage brandy, this is shown in TABLE 7. Prices shown in this table are final and not subject to change. Grapes pooled by cooperatives, those grown by processors and used for their own production and grapes crushed to growers' accounts are not included.

Weighted average prices reflect final prices through January 10, 2008 and include any Brix adjustments, bonuses or allowances. Prices are equivalent to delivered basis in the area grown including normal within-area hauling allowances. Purchases made on a roadside basis include the usual hauling allowance for local delivery in the area grown. Out-of-area purchases made on a delivered basis do not include extra hauling allowances for delivery outside the area.

The next example indicates the method used for calculating weighted averages. The following two purchases were made.

Variety	District	Tons	Degrees Brix	Base Price	Price Paid Per Ton	Acceptable Brix Limits	Brix Adjustment Factors	Brix Adjustment Limits
Petite Sirah	1	155.5	20.6	\$450.00	\$364.50	19 - 25	+ or - 10%	Base 22, Min 20, Max 24
Petite Sirah	1	20.5	19.0	\$450.00	\$418.50	19 - 25	+ or - 10%	Base 22, Min 20, Max 24

Note: The variety, district, base price, and Brix Adjustment Factors (including Brix limits) are the same. The tons purchased, degrees Brix, and price paid per ton are the only differences in this example.

Step 1: Multiply the tons by the Brix for each lot purchased and then add the products to get the total. Also, add the tons purchased.

Variety	District	Tons	Degrees Brix	Total (Tons X Brix)
Petite Sirah	1	155.5	20.6	155.5 X 20.6 = 3,203.3
Petite Sirah	1	20.5	19.0	20.5 X 19.0 = 389.5
TOTALS		176.0		3,592.8

Step 2: Divide the total (3,592.8) by the total tons purchased (176.0) to get the Weighted Average Degrees Brix. 3,592.8 = 20.4 176.0

Step 3: Multiply the purchased tons by the Price Paid Per Ton for each lot purchased and then add the products to get the

Variety	District	Tons	Price Paid Per Ton	Total (Tons X Brix)
Petite Sirah	1	155.5	\$364.50	155.5 X 364.50 = 56,679.8
Petite Sirah	1	20.5	\$418.50	20.5 X 418.50 = 8,579.3
TOTALS		176.0		65,259.1

Step 4: Divide the total (65,259.1) by the total tons purchased (176.0) to get the Weighted Average Price Per Ton: 65,259.1 = \$370.79

TABLE 7 shows <u>all grape tonnage purchased as distilling material other than beverage brandy</u> by California processors from the 2007 crop. The tonnage, weighted average degrees Brix and price per ton are shown by grape type and variety. State totals and averages for 2006 are given for comparison.

TABLE 8 shows <u>base prices paid to growers</u> by Brix adjustment factors, purchased tonnage, type, variety and reporting district where grown. Weighted average base prices and total purchased tonnage are included.

The Brix adjustment factors determine adjustments to base prices to compensate for sugar variations. In this report, adjustments are expressed in dollars per ton, or percent of base price per degree variance from the established Brix base. Occasional lots are traded on price per degree Brix as delivered.

TABLE 9 includes tonnage of all grapes crushed to growers' accounts by California processors from the 2007 crop. Growers retained ownership of these grapes at the time of crushing. This tonnage is reported by grape pricing district and variety. Comparisons with 2006 are shown. (Table 9 only appears in the Final Grape Crush Report.)

TABLE 10 gives the <u>weighted average price per ton, delivered basis, of all tonnage purchased from non-related sources for wine, concentrate, juice, vinegar, and beverage brandy</u> (TABLE 4) by California processors from the 2007 crop. The weighted average prices are reported by variety, and grape pricing districts. State averages for 2006 are shown for comparison. TABLE 10 does not include prices of tonnage purchased as distilling material other than beverage brandy, this is shown in TABLE 7. Prices shown in this table are final and not subject to change. Grapes pooled by cooperatives, those grown by processors and used for their own production and grapes crushed to growers' accounts are not included.

Non-Related Purchased Tons: Excludes tonnage of grapes purchased from a grower if:

- (a) The grower or an affiliate of the grower, or both the grower and the affiliate of the grower, owned, directly or indirectly, at least 5 percent of the indicia of ownership or voting authority of the winery (processor);
- (b) The winery (processor) or an affiliate of the winery, or both the winery and the affiliate of the winery, owned, directly or indirectly, at least 5 percent of the indicia of ownership or voting authority of the grower;
- (c) The winery (processor) or an affiliate of the winery, or both the winery and the affiliate of the winery, provided long-term financing to the grower in exchange for rights or options to purchase a significant portion of the grower's harvest.

Grape Variety Synonyms

Alicante Bouschet – Alicante
Beauty Seedless – Black Beauty
Black Prince – Rose of Peru
Blaufraenkisch – Lemberger
Burger – Monbadon
Chardonnay – Pinot Chardonnay,
Chardonnay Musque
Cinsaut – Black Malvoisie, Black Malvasia
Crimson Seedless – Red Crimson
Emerald Seedless – Black Seedless
Flame Seedless – Red Flame
Gamay (Napa) – Gamay, Valdiguie
Gray Riesling – Trousseau Gris
Grenache – Gernache Noir
Italia – Muscat Italia

Malaga – White Malaga
Malvasia Bianca – Vennentino, Vermintino
Mataro – Mourvedre
Meunier – Pinot Meunier
Moscato Gaillo – Muscat Yellow
Muscat Blanc – Muscat Canelli,
Muscat Blanc A Petits Grains
Muscat Hamburg – Black Muscat
Negrette – Pinot St. George
Nero D'Avola – Calabrese
Palomino – Golden Chasselas
Pinot Gris – Pinot Grigio
Princess – Melissa
Red Globe – Rose Ito
Refosco – Mondeuse

Ribolla Gialla — Rebolla
Rubired — Tintoria
Ruby Seedless — King Ruby
Sangiovese — Sangioveto, Brunello
Sauvignon Vert — Muscadelle
St. Emilion — Ugni Blanc, Trebbiano
Syrah — French Syrah, Shiraz, Syrah Noir
Tempranillo — Tinta Roriz, Valdepenas
Touriga Nacional — Touriga
Trousseau — Bastardo
White Riesling — Johannisberg Riesling,
Riesling

Synonyms for variety names are shown on Page 5.
 See code descriptions in Table 8 - Supplement: 2007 Brix Adjustment Factors.

b/ Other categories include minor and mixed varieties.
c/ Price basis per Degree Brix.

d/ Price per Degree Brix not included in weighted average base price.

e/ All prices based on per Degree Brix.

TABLE 8 - SUPPLEMENT: 2007 BRIX ADJUSTMENT FACTORS

TABLE 8 - SUPPLEMENT: 2007 BRIX ADJUSTMENT FACTORS

The following Brix adjustment factors are on a per degree Brix basis and are normally calculated to a tenth of a degree, and are cumulative unless otherwise indicated. Most processors, however, indicate maximum and/or minimum Brix acceptance limits. Grapes testing above or below these limits may be subject to price renegotiation, acceptance for use other than for table wine, or rejection by the processors. Discounts for high sugar apply to both base price and bonus unless otherwise stated. There are factors other than Brix, such as material other than grapes (MOG), defects, weight loss in late harvest grapes, and sugar/acid ratios that affect grape prices. These were not considered in this presentation, unless otherwise stated, but were considered in arriving at weighted average prices.

Category Code	than Brix, such in this presenta	as matenai d ation, unless d	other than grapes (MOG), delects, wo otherwise stated, but were considered		Code	Description_

TABLE 8 - SUPPLEMENT: 2007 BRIX ADJUSTMENT FACTORS

The following Brix adjustment factors are on a per degree Brix basis and are normally calculated to a tenth of a degree, and are cumulative unless otherwise indicated. Most processors, however, indicate maximum and/or minimum Brix acceptance limits. Grapes testing above or below these limits may be subject to price renegotiation, acceptance for use other than for table wine, or rejection by the processors. Discounts for high sugar apply to both base price and bonus unless otherwise stated. There are factors other than Brix, such as material other than grapes (MOG), defects, weight loss in late harvest grapes, and sugar/acid ratios that affect grape prices. These were not considered in this presentation, unless otherwise stated, but were considered in arriving at the weighted average prices.
